SUMMARY

Experienced Data Scientist with expertise in Machine Learning, Deep Learning, NLP, Computer Vision, and MLOps, specializing in Python-based AI systems and intelligent automation. Proven experience building production-grade document intelligence and validation pipelines using OCR, coordinate-based extraction, and self-learning workflows. Skilled in prompt engineering, LLM evaluation, and multimodal AI systems using models such as GPT, Gemini, and Claude. Proficient in deploying scalable AI solutions using AWS, GCP, CI/CD, and modern MLOps practices. Delivered 10+ real-time AI/ML solutions and developed 50+ end-to-end proof-of-concept projects across multiple domains, with a strong focus on research-driven problem-solving and intelligent automation.

TECHNICAL SKILLS

- **Languages:** Python, R, SQL, HTML
- **Core Skills:** Machine Learning, Deep Learning, NLP, Computer Vision, Generative AI, Time-Series Analysis, Forecasting, LLMs (GPT and BERT), Mathematics, Statistics, Prompt Engineering, and Web Scraping.
- **Frameworks & Libraries:** TensorFlow, PyTorch, Keras, Scikit-Learn, Flask, FastAPI, RESTful, and Beautiful Soup.
- **Tools & Technologies:** Jupyter Notebook, Power BI, Git, Excel, Pandas, NumPy, Seaborn, Matplotlib.
- **Platforms:** AWS, Google Cloud Platform, Azure, Docker, MongoDB, MySQL, RStudio, and Visual Studio Code.
- **Predictive Modelling & Deployment:** MLOps, NLPops, DLOps, LLMops, MLFlow, CI/CD, GitHub Actions, DVC.
- **Soft Skills:** Analytical & Critical Thinking, Problem Solving, Effective Communication, and Research Skills.

PROJECTS:

1. AI-Powered Invoice Intelligence & Self-Learning Validation System | Python, Tesseract OCR, SQL Server, Custom UI, Doctr

Role: Data Scientist – AI Document Intelligence @Ray Business Technologies PVT LTD.

Key Contributions:

- Designed and implemented an AI-driven invoice validation platform replacing Kofax TotalAgility, leveraging OCR, coordinate-based extraction, and generative AI to automate enterprise document processing, reduce manual effort and accelerate document processing. An AI-enhanced validation module that adapts by learning field positions from manual corrections for future use.
- Reduced manual invoice review effort by ~80% using predictive field detection, intelligent fallback logic, and coordinate-based learning for recurring vendors. Implemented a coordinate-based learning map to streamline recurring validations, improving consistency and reducing effort.
- Improved document processing speed by 8–10 minutes per file, significantly increasing operational efficiency. Delivered a modular, scalable solution that eliminated licensing costs while maintaining high accuracy and flexibility.

2. LLM-Powered Fintech Knowledge Assistant with RAG | Python, Langchain, Transformers, Streamlit, NLP, pdftools

Role: AI Solutions Developer/Data Scientist @Freelance Project as AI Developer

Key Contributions:

- Developed a domain-specific conversational AI assistant with a ChatGPT-like interface for a fintech company, designed to handle complex queries related to banking, finance, loans, and procedural workflows.
- Built a chat interface with natural language understanding tailored to financial domain queries. Integrated foundational concepts of generative AI and machine learning to simulate human-like responses with contextual accuracy.
- Implemented document-based Q&A using Retrieval-Augmented Generation (RAG), allowing users to upload financial documents (PDFs) and receive answers extracted directly from the content. Designed a semantic search pipeline using vector embeddings to retrieve relevant chunks for accurate response generation.
- Enabled real-time, conversational experiences for non-technical users, reducing the dependency on human support staff for FAQs and procedural guidance.

OPEN-SOURCE PROJECT:

3. Credit Card Default Prediction | Supervised-Classification, Python, Scikit-Learn, AWS, CI/CD

Random Forest-based model as an open-source contribution to a GitHub user, predicted and deployed efficiently.

- Developed a Random Forest model for predicting. Optimized with GridSearchCV, achieving 90%+ accuracy.
- Integrated CI/CD on AWS, improving deployment efficiency, and enabling automated & scalable risk assessment.

WORK EXPERIENCE

AI Trainer – Agent Functional Call (Turing Enterprises, Sept 2025–March 2026): Designing realistic multi-turn OS-level agent tasks and evaluation pipelines to improve large language models; creating Python-based evaluators to validate tool-use behavior across applications such as Mozilla Thunderbird, LibreOffice, VS Code, Chrome, and Linux OS utilities; and generating structured conversational and functional datasets used for LLM fine-tuning, capability benchmarking, and improving reasoning, API/tool-calling accuracy, and real-world task completion.

Data Scientist (Ray Business Technologies PVT. LTD., August 2023–September 2025): Developing AI-driven document intelligence systems using OCR, coordinate-based extraction, and automated validation pipelines; implementing self-learning mechanisms to improve accuracy and streamline enterprise document workflows.

Mathematics Teacher (JEE & CBSE Boards, June 2019–April 2023): Guided high school students in mastering advanced mathematics concepts for various competitive exams like AIEEE, JEE (Mains and Advanced), etc.

EDUCATION

- **Full Stack Data Science** (Physics Wallah Skills, Aug 2023–Jan 2025)
- Bachelors of Pharmacy (70%, **Rajiv Gandhi Technical University**, Bhopal, June 2015–April 2020)
- Diploma in Computer Applications, i.e. **DCA** (Makhanlal National University of Journalism, 2014–2015)
- 12 Boards with **Mathematics (76%, Model HS School, Bhopal, 2012–2014)**

CERTIFICATIONS AND ACHIEVEMENTS

- **Fundamentals of Generative AI** (Ineuron Intelligence, June 2024–November 2024)
- **Golden Badge** in Python and SQL with 5 Stars, **Silver Badge** in Problem-Solving with 4 stars over **Hackerrank**, **1st Rank** in ML live project assessment,
- **Interests:** Chess, Algorithmic Problem Solving, AI Research, and Emerging Technologies.
